Stop "brutane" mask induction and turn panic into play

For children, the process of undergoing surgery is already unsettling, and the process of mask-based induction is often the most traumatizing part. Often kids will kick and scream rather, believing they're being trapped by the gas or suffocated by the mask. The experiences create negative emotional scarring that can last weeks, months or even years.

With the introduction of the revolutionary Pediatric Device for Induction of Anesthesia device, or "PeDIA" for short, that stress and anxiety can be replaced with something colorful and fun.

As the world's first mask-free system and method for inhalation induction, the PeDIA provides a solution to this problem that anesthesia providers have been researching for decades. It replaces the mask with a colorful balloon, which actually allows the child to put themselves to sleep rather than being forced to submit to an unfamiliar mask.

PeDIA resolves the problems of traditional mask induction while fostering a sense of trust and patient satisfaction.

Anestand ®

Customized anesthesia workstation for every anesthetizing location

Item#
ANE77006
Anestand Anesthesia Stand, Complete Tray and Clamp

ANE77001 Replacement Tray
**ANE77005** Replacement Clamp

Benefits to Providers
· Keep medications near IV port
· Ergonomical work space
· Makes wiping IV port easy
· Extra set of hands when help not around
· Helps make RSI safe
· Creates valuable space for non-OR anesthesia

Value to Hospital
· Helps with regulatory compliance
· Sharps management
· Could help reduce HAIs
· Demonstrates support for anesthesia team
· Reusable/single fixed cost

1. The recessed tray holds and organizes supplies for induction of anesthesia and most anesthetic procedures
2. Clips keep IV tubing securely in place, so it's easy to "scrub the hub"
3. Corner grips for suction tubing and more
4. The adjustable support post lets you position it just where you need it
5. The anesthesia circuit clips keep your circuit fixed and firmly in place
6. Patented clamp attaches to OR bed, IV pole, or inpatient bed

**Anestand can help health systems save lives, lower costs and improve compliance.
All at the same time.**

4
The first and only anesthesia stand to safely and securely keep all supplies where they're needed can also be one of your best weapons in combatting infections.

Anestand Facts

- A small investment could help in compliance, save time and quickly pay for itself.
- By having supplies and medications organized and easily available with IV port ready, Anestand aids in patient safety.
- The bottom line: Anestand could help prevent costly infections and save money by helping anesthesia providers save OR time.

Of all the many safety and security features Anestand offers, perhaps the single greatest is how it helps health systems to lower HAIs.

- Having IV port ready for site alcohol scrub makes disinfection (and compliance) easier — Anestand keeps your IV port ready for scrubbing.
- By keeping medications immediately available and infusion ports clearly defined Anestand provides additional safety.
- By keeping supplies immediately available, Anestand helps make RSI (rapid sequence inductions) safe.
- During COVID, Anestand assists anesthesia providers as an extra pair of hands, while other healthcare personnel are being asked to keep distance from the airway.

Anestand can provide value in safety, compliance, and convenience. As soon as you use it, you'll wonder how you ever managed without it.

- CDC, JCAHO, SHEA, and other organizations require cleaning the port with every injection. Anestand helps your facility and providers comply with these regulations.
- Patients with an HAI stay 19 additional days, or $11.2 million in HAI treatment and/or lost revenue. For a small fixed cost your facility could get a large return on investment.
- Keeping supplies organized on a tray may prevent dropped items and reduce replacement costs. Anestand makes it far easier to keep supplies organized and right at hand.
