Innova® CPAP masks feature patented AIR^ogel with Advanced Cushion Technology and Active Headgear Connector™. Together, they provide an optimal fit, maximum comfort, and freedom.

- The Touchless Spacebar's unique design eliminates any contact with the patient's forehead
- The quick-release headgear is lightweight, breathable, and slides off easily with one hand
- Made in the USA

- The Veraseal® 2 disposable full face mask brings AIR°gel® Technology to the acute care environment for a giant step forward in patient comfort. Three color coded elbow designs make choosing the right mask for CPAP, single, or dual limb circuit NIV systems simple. The Veraseal® 2 fits quickly and easily while enhancing patient comfort. Both vented (with leak ports) and non-vented (without leak ports) versions are available for CPAP, Bilevel, and ventilator therapy.
- The AIR°gel® cushion provides the utmost in gentle cushioning to protect from pressure points and irritation. AIR°gel® promotes advanced skin protection, superior performance, and unbeatable comfort, all in a lightweight mask.
- The active headgear connector moves as the patient moves for a reliable seal.
- Breathable headgear lets patients enjoy soft, lightweight stability they can count on for a comfortable fit.

Humidoflo High Flow Nasal Cannula V P

10/case

Size	Item#
Small	HFN001AS
Medium	HFN001AM
Large	HFN001AL

- Tube Side Quick Switch connects tube to either side of the patient
- Kink-free prongs and flexible, low-noise tube
- Compatible with any ventilator with a standard 22mm ISO connector, including Respironics V60
- Suitable alternative to Philips AC611
- Can be used with F&P 850 and 950 with HFN001-FPA adapter
- Comparable to F&P OptiFlow cannula (OPT942, OPT944, OPT946)

With Nasal High Flow (NHF) therapy, patients benefit from warmed, humidified oxygen at a flow rate greater than those seen with conventional oxygen delivery devices, and more than peak inspiratory airflow. NHF treatment is better tolerated due to the heated and humidified air. The NHF apparatus is also smaller and more comfortable on the face than an NIV mask. Patients can continue eating, drinking and talking during treatment, leading to higher compliance. Delivery respiratory gases range from 2 – 60 L/min and O2 concentrations range from 21 – 100%. NHF is intended for patients in homes and long-term care facilities and may help prevent intubation.

Item# **RES055**
2500ml

RES056
5000ml

RES055P
Pediatric

- Chambers for ball and volumetric
- Tube
- Mouthpiece

The Volumetric Incentive Spirometer helps patients perform and monitor their own post-surgical breathing exercises. The patients are encouraged to breathe in from the device as slowly and as deeply as possible.

- Adjustable target indicator provides a volumetric guideline for adequate lung exercise
- Dual-sided, clear and legible identification of volumes
- Inspiratory indicator encourages patients to maintain an appropriate rate inspiration
- Compact and ergonomic design

Drainage Bag with Y-Adapter **V** **P**

Item# **RES071**
750cc
50/case

- Designed to ensure patients receive mist rather than liquid accumulated in the tubing
- Includes hanger and bottom drainage port
- Works with 22mm corrugated aerosol tubing

Drainage Bag with T-Adapter **V** **P**

Item# **RES070**
750cc
50/case

Three Ball Spirometer **V** **P**

Item# **RES057**
10/case

- Improves the patient's lung expansion by training their inhaled lung volume
- Three color coded balls inside the chamber offer incentive for the patient

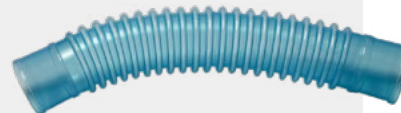

- Three color-code balls in three chambers
- Chamber to lung capacity: 600cc/sec, 900cc/sec, and 1200cc/sec
- Compact design and break-resistant plastic
- Each set includes incentive spirometer, disposable mouth piece and flexible tube

RESPIRATORY DISPOSABLES

Lynx Venturi Oxygen Delivery **V** **P**

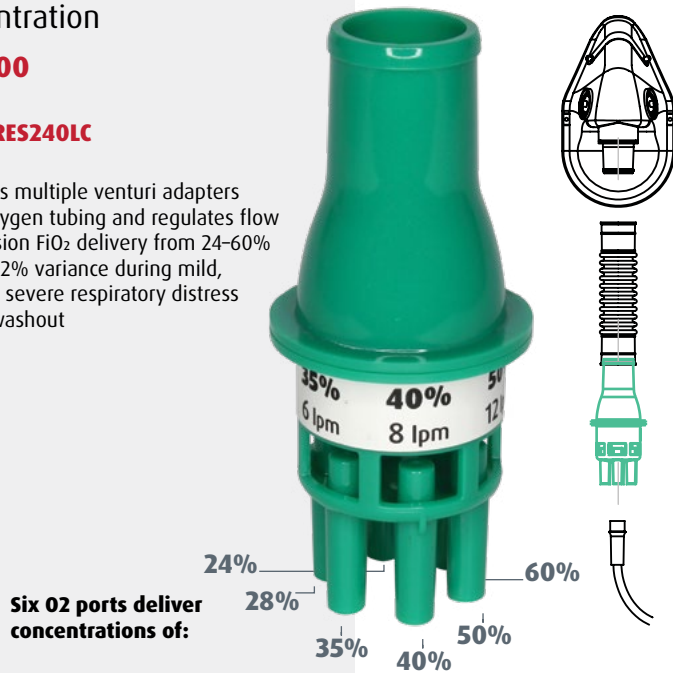

Low Concentration

Item# **RES2400**

Each

Adapter Only **RES240LC**

- Design replaces multiple venturi adapters
- Connects to oxygen tubing and regulates flow
- Provides precision FiO₂ delivery from 24-60% with less than 2% variance during mild, moderate, and severe respiratory distress
- Excellent CO₂ washout

Six O₂ ports deliver concentrations of:

Unprecedented simplicity

No training required. Intuitive design makes it easy for nurses to operate without assistance, freeing up RTs to work where most needed.

Do no harm

Quicker de-escalation of O₂ levels and prevention of excessive CO₂ in the patient.

Reduction in waste

Remains with patient throughout EMS and hospital journey, replacing multiple adapters which may get lost or contaminated during transition.

Unmatched precision

Provides specific levels of oxygen with less than 2% variance. Comparable products vary by as much as 30%.

High Concentration

Item# **RES2401**

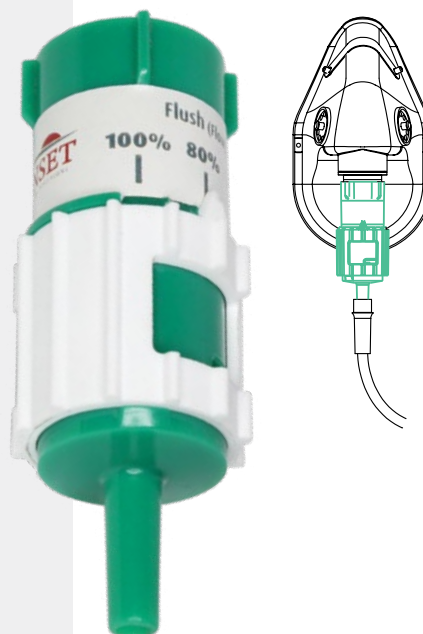

Each

Adapter Only **RES241HC**

- Allows rapid de-escalation of FiO₂ in the EMS ambulance or ED to prevent CO₂ buildup.
- Replaces bulkier high concentration venturis and non-rebreather bag systems
- Accurate assessment of the severity of hypoxemia (PaO₂/FiO₂) allows early intervention and better outcomes
- Excellent CO₂ washout

Single flow (flush) with an adjustable window shutter delivers oxygen concentrations of 65% • 80% • 100%

Capabilities could include replacing non-rebreathers and/or partial rebreather products

Ohmeda Inlet • Barbed Outlet **RES8160037**

Assured, repeatable accuracy to enable safe, effective weaning.

What is Microflow used for?

Microflow is primarily used to supply supplementary oxygen to infants with bronchopulmonary dysplasia (BPD).

BPD is common in very low birth weight and pre-term infants that have needed mechanical ventilation or have been treated with high oxygen concentrations due to respiratory distress syndrome (RDS)/chronic lung disease (CLD).

The risk of RDS/CLD is inversely related to birth weight and gestational age.

Infants may need very low supplementary oxygen for many months to compensate for underdeveloped lungs.

Microflow benefits

- Enables baby to receive oxygen therapy at home, putting families together sooner and increasing parent satisfaction
- Less time in hospital, lower cost of care
- Accurate, repeatable steps
- Micro step changes in flow
- Enables low flow rates to achieve target saturation
- Enables oxygen flow to be weaned

RESPIRATORY DISPOSABLES

V Contract MS1087

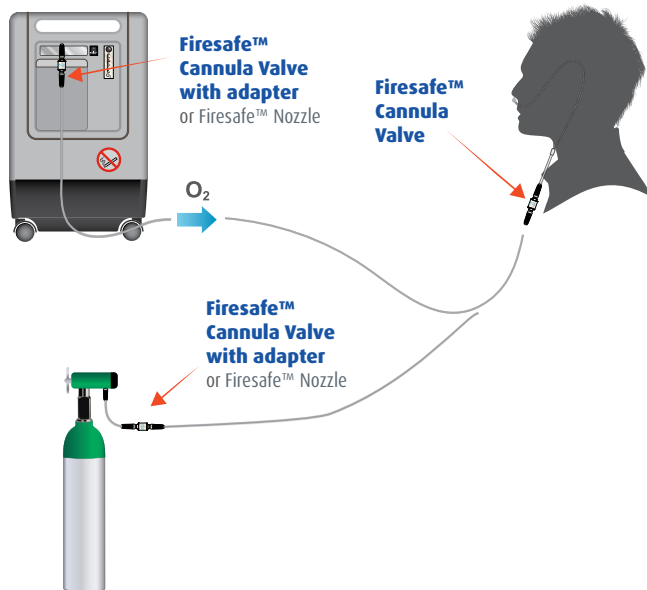

P Contract PP-NS-1741

Firesafe Thermal Shut-Off Valve V

Item#
RES010
Bidirectional
10/case

- A thermal fuse designed to stop the flow of gas in the event that the downstream oxygen tubing is ignited
- Helps protect against oxygen tubing fires
- Helps keep patients safe no matter what method of oxygen delivery they use
- Offers a cost-effective solution to lower the risk of serious patient injury in an oxygen fire
- Smaller
- Laser etched
- Expiration date
- Human readable UDI
- Designed to last 5 years

Home oxygen fires represent a much higher risk in the United States than the United Kingdom, where the fitting of thermal fuses for oxygen is mandatory.

Fatalities per 100,000 patients

* 1 death was reported among 73% of the patient population (2013-17)

Solidifier — Dissolvable Sachet

100/case

Item#	Size
RES8001	150cc
RES8004	450cc
RES8015	1500cc

Economical

Pre-measured rupturing pouches eliminate the tearing and spillage associated with conventional solidifiers for medical waste.

Particulate-Free

Self-activating technology reduces particulates and bacterial exposure, and eliminates harmful dust.

Reduce Exposure

Helps to minimize the risk of cross contamination of infectious waste to medical staff.

Solidifier with Treatment — Dissolvable Sachet

100/case

Item#	Size
RES8002T	250cc
RES8005T	500cc
RES8007T	750cc
RES8015T	1500cc

Contain spills quickly with this astonishingly absorbent liquid solidifier packet

Super absorbent packets quickly absorb up to 400 times their own weight in aqueous solutions. These drop-in liquid absorbers offer the ideal solution for shipping, storing, and handling of aqueous solutions that must be contained quickly and effectively in the event of a leak.

Smart Design

Specially formulated pouch bursts open in the presence of a wide range of fluids to quickly immobilize them. Solidified material is easily contained by an outer vessel, shipping container, or other such device, resulting in safer handling.

Ideal for Medical Use

The most common applications for the use include medical shipping containers and bio-specimen transportation bags used for vials, test kits, and lab trays.

Standard Switch P

Sterile and latex-free

Once the airway is clear, withdraw the catheter completely into the plastic sheath. A black mark on the catheter indicates full withdrawal.

ISO color coded for instant recognition of catheter sizes.

Smooth tubing surface and atraumatic rounded catheter tip for minimal tracheal wall injury.

With the unique isolation valve, 72 hour closed suction system features safe and simple access for mechanically ventilated patients for 72 hours of continuous use.

Deluxe Switch (One-handed operation) P

Sterile and latex-free

Suction Control Switch

Ergonomic suction control switch with a built-in security lock to visually determine if the device is in the OFF/ON position. Offers a quick and easy, single-handed operation design, which allows you to keep your eye on the patient and do no harm. One-handed operation allows the free hand to support the ET or Trach device to ensure less trauma to the site.

Irrigation Port

Offers a one-way valve to prevent backflow leakage and easy access for cleaning the closed suction system.

MDI Port

Provides access for drug delivery as needed. Large and easy to grip port allows for rapid medication introduction.

Catheter Tip

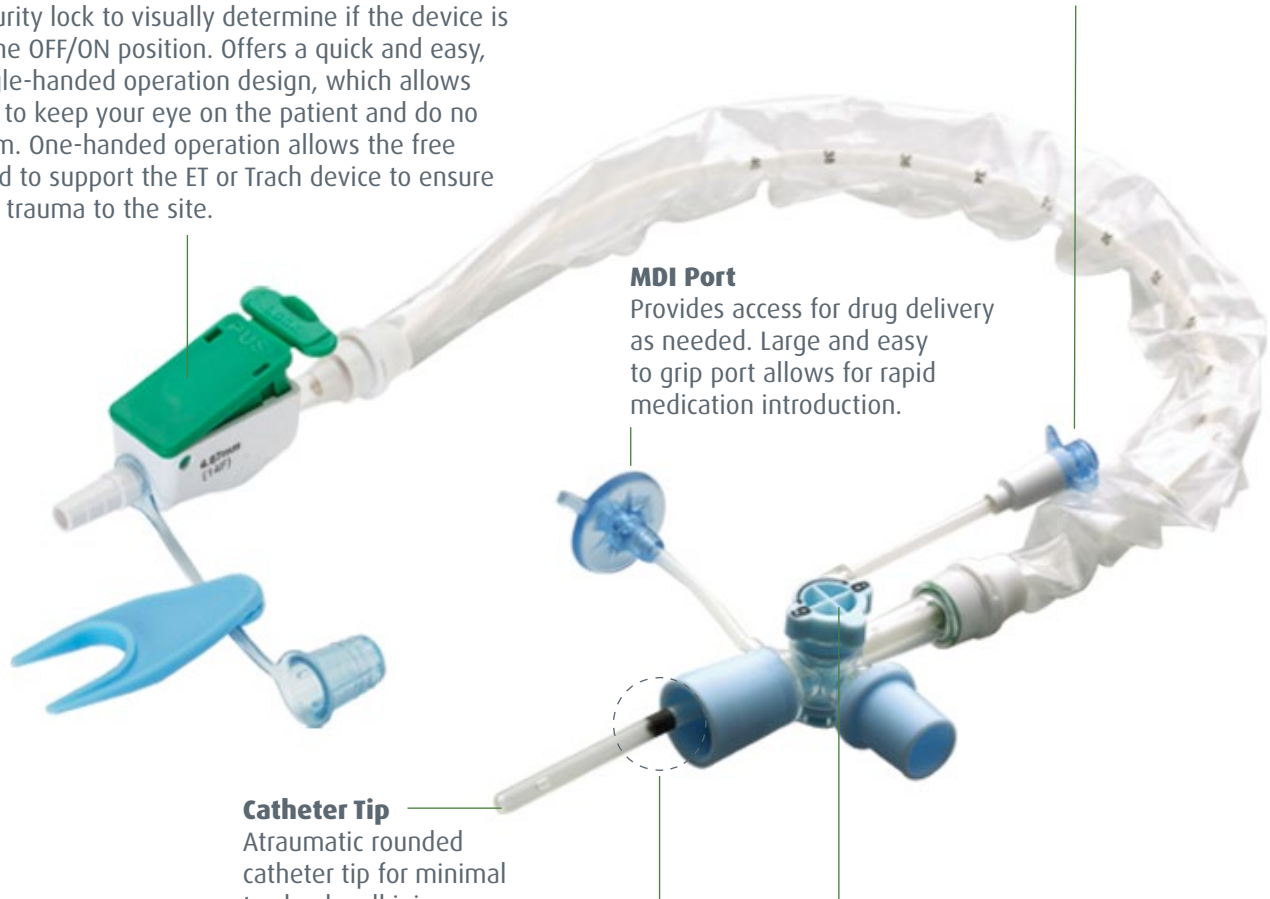

Atraumatic rounded catheter tip for minimal tracheal wall injury.

Isolation Valve

Seals the irrigation chamber to provide a better cleaning of the catheter. Allows for continuous ventilation and prevents backflow of saline during cleaning to ensure patient comfort and safety.

Black Ring Indicator

Ensures that the catheter is properly withdrawn from the ET or Trach device. Black ring must be visible in the plastic sheath after suctioning the patient.

ANESTHESIA

PeDIA

Pediatric Device for Induction of Anesthesia

Item#	Size
ANEP001B	Blue
ANEP001Y	Yellow
ANEP001P	Purple

PeDIA resolves the problems of traditional mask induction while fostering a sense of trust and patient satisfaction.

For children, the process of undergoing surgery is already unsettling, and the process of mask-based induction is often the most traumatizing part. With the introduction of the revolutionary Pediatric Device for Induction of Anesthesia device, or “PeDIA” for short, that stress and anxiety can be replaced with something colorful and fun.

As the world’s first mask-free system and method for inhalation induction, the PeDIA provides a solution to this problem that anesthesia providers have been researching for decades. It replaces the mask with a colorful balloon, which actually allows the child to put themselves to sleep rather than being forced to submit to an unfamiliar mask.

Anestand

Item# **ANE77006**

Customized anesthesia workstation for every anesthetizing location

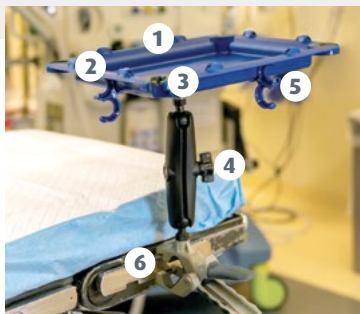

Benefits to Providers

- Keep medications near IV port
- Ergonomical work space
- Makes wiping IV port easy
- Extra set of hands when help not around
- Helps make RSI safe
- Creates valuable space for non-OR anesthesia

Value to Hospital

- Helps with regulatory compliance
- Sharps management
- Could help reduce HAIs
- Demonstrates support for anesthesia team
- Reusable/single fixed cost

Anestand can help health systems save lives, lower costs and improve compliance. All at the same time.

1. The recessed tray holds and organizes supplies for induction of anesthesia and most anesthetic procedures
2. Clips keep IV tubing securely in place, so it's easy to “scrub the hub”
3. Corner grips for suction tubing and more
4. The adjustable support post lets you position it just where you need it
5. The anesthesia circuit clips keep your circuit fixed and firmly in place
6. Patented clamp attaches to OR bed, IV pole, or inpatient bed
