*Sunset's Vesper Full Face and Nasal Masks present the latest in CPAP mask design to provide patients with fresh options for maximum comfort.*

Vesper masks introduce a pared back fit, with up-to-date design details like the ergonomic stabilizing arms that curve up to the temples for patients who prefer to forego a forehead piece.

Vesper masks provide more visibility, a feeling of openness and a lighter fit. The flexible interface moves with side or stomach sleepers. The open structure eliminates forehead marks. Vesper masks also feature a 360-degree swivel elbow to prevent awkward tube tangles.

Vesper masks bring balance and calm to the nighttime, softening the edges of sleep.

- New wing-shaped stay routes the headgear under the ears, ensuring comfort and a great fit
- Permanent 360° swivel provides reliable performance in any position, including over the headboard
- Breathable cloth design eliminates fogging that is common in hard plastic masks - nothing breathes like cloth, keeping skin dry and comfortable
- For those who want to read or watch TV while in bed, SleepWeaver 3D can be worn with glasses
- Users prefer a soft cloth against the face over rubber, silicone and other gels. Cloth masks eliminate the need for a cushion or nasal pad

### SleepRes V-Com™

Item#  
**CAP1026**  
Each

#### Helping patients adjust to CPAP on their own

Adding V-Com to a patient's therapy is like Training Wheels for CPAP™. This simple device can mean the difference between your patient giving up on PAP or continuing their lifesaving treatment.

Within minutes, a respiratory therapist can show a patient what the PAP pressure feels like with and without the V-Com device inline. This feedback mechanism allows them to better understand how their airflow should feel.

As you know, comfort equals adherence and adherence equals better treatment outcomes.

#### The V-Com Difference

Improve early PAP tolerance with V-Com by providing your patients with initial comfort that doesn't compromise their treatment.

Traditionally, when a patient struggles with the constant flow of air pressure, pressure settings are reduced.

Reducing pressure settings to increase a patient's initial tolerance improves comfort, but at a cost.

Decreasing pressure settings also means decreasing expiratory positive airway pressure (EPAP) which is principally responsible for therapy.

The V-Com effect is flow-dependent with maximum comfort during the high inspiratory flows. As a result, V-Com has minimal effect on expiratory positive airway pressure.

With Nasal High Flow (NHF) therapy, patients benefit from warmed, humidified oxygen at a flow rate greater than those seen with conventional oxygen delivery devices, and more than peak inspiratory airflow. NHF treatment is better tolerated due to the heated and humidified air. The NHF apparatus is also smaller and more comfortable on the face than an NIV mask. Patients can continue eating, drinking and talking during treatment, leading to higher compliance. Delivery respiratory gases range from 2 - 60 L/min and O2 concentrations range from 21 - 100%. NHF is intended for patients in homes and long-term care facilities and may help prevent intubation.

- Tube Side Quick Switch connects tube to either side of the patient
- Kink-free prongs and flexible, low-noise tube
- Compatible with any ventilator with a standard 22mm ISO connector, including Respironics V60
- Suitable alternative to Philips AC611
- Can be used with F&P 850 and 950 with HFN001-FPA adapter
- Comparable to F&P OptiFlow cannula (OPT942, OPT944, OPT946)

**Assured, repeatable accuracy to enable safe, effective weaning.**

### What is Microflow used for?

Microflow is primarily used to supply supplementary oxygen to infants with bronchopulmonary dysplasia (BPD).

BPD is common in very low birth weight and pre-term infants that have needed mechanical ventilation or have been treated with high oxygen concentrations due to respiratory distress syndrome (RDS)/chronic lung disease (CLD).

The risk of RDS/CLD is inversely related to birth weight and gestational age.

Infants may need very low supplementary oxygen for many months to compensate for underdeveloped lungs.

### Microflow benefits

- Enables baby to receive oxygen therapy at home, putting families together sooner and increasing parent satisfaction
- Less time in hospital, lower cost of care
- Accurate, repeatable steps
- Micro step changes in flow
- Enables low flow rates to achieve target saturation
- Enables oxygen flow to be weaned
