

BiliSoft™ 2.0 Phototherapy System

Item#

MAT9765 BiliSoft 2.0 System – Large (10×12")

MAT11559 BiliSoft 2.0 System – Small (8×10")

The BiliSoft™ 2.0 Phototherapy System is an easy-to-use therapy device designed to treat infants with jaundice.

The right touch—and blue light—can make all the difference for infants with jaundice. BiliSoft provides research-backed phototherapy that won't interrupt precious bonding moments. Its soft cover and large pliable pad wrap babies in comfort and allow caretakers to hold, feed or swaddle the infant during treatment.

BiliSoft meets or exceeds the American Academy of Pediatrics (AAP) guidelines for intensive phototherapy to effectively treat hyperbilirubinemia and support even the tiniest patients with more comfort, better bonding and higher quality developmental care.

Portable

Long, lightweight fiber-optic cable and quiet operation makes BiliSoft™ 2.0 ideal for in-home use

Whisper-Quiet Operation

Helps maintain an environment to promote better sleep and growth

Comfort for Babies

Babies can be wrapped in a blanket and even held during therapy for more comfort and relaxation

Features

Intensive Therapy Coverage

Large treatment area promotes developmental and family-centered care

Built to Last

Durable design for extended use over time

Compact & Lightweight

Easy to handle with a minimal footprint

Energy Efficient

Uses a single high-powered LED instead of multiple bulbs

Extended LED Life

Over 50,000 hours of effective light therapy

Ideal for Home Use

Quiet operation with a long, flexible fiberoptic design
