Vesper Nasal Headgear **HG207**

Vesper masks introduce a pared back fit, with up-to-date design details like the fabric-wrapped ergonomic stabilizing arms that curve up to the temples for patients who prefer to forego a forehead piece.

Vesper masks provide more visibility, a feeling of openness and a lighter fit. The flexible interface moves with side or stomach sleepers. The open structure eliminates forehead marks. Vesper masks also feature a 360-degree swivel elbow to prevent awkward tube tangles.

Features

Soft and skin-friendly headgear fabric helps patients comfortably adapt to treatment

Quiet honeycomb vent reduces airflow erosion intensity for peaceful sleep

Easy pop cushions attach or detach from mask in an easy pop; no need to painstakingly align pieces

Quick release connector rapidly and easily separates or connects mask and the tube

Vesper comes in attractive retail packaging

SleepRes V-Com™

CAP1026
Each

Helping patients adjust to CPAP on their own

Adding V-Com to a patient's therapy is like Training Wheels for CPAP™. This simple device can mean the difference between your patient giving up on PAP or continuing their lifesaving treatment.

Within minutes, a respiratory therapist can show a patient what the PAP pressure feels like with and without the V-Com device inline. This feedback mechanism allows them to better understand how their airflow should feel.

As you know, comfort equals adherence and adherence equals better treatment outcomes.

90-Degree CPAP Tubing Elbow

Item#
CAP1027
Each

The Sunset 90-Degree CPAP Tubing Elbow Adapter connects standard 22mm or slim 15mm CPAP tubes to most CPAP machines at a 90°, relieving stress on the tubing connection and creating a more convenient pathway to the bed.

The V-Com Difference

Improve early PAP tolerance with V-Com by providing your patients with initial comfort that doesn't compromise their treatment.

Traditionally, when a patient struggles with the constant flow of air pressure, pressure settings are reduced.

Reducing pressure settings to increase a patient's initial tolerance improves comfort, but at a cost.

Decreasing pressure settings also means decreasing expiratory positive airway pressure (EPAP) which is principally responsible for therapy.

The V-Com effect is flow-dependent with maximum comfort during the high inspiratory flows. As a result, V-Com has minimal effect on expiratory positive airway pressure.

When power goes out, your CPAP stays ON!®

Unlike machine-specific batteries, the Portable Outlet X9 uses a standard AC outlet, allowing patients to use their existing manufacturer power supply instead of proprietary adapters or cables. Because it functions as a true Uninterruptible Power Supply (UPS), customers simply leave their CPAP plugged into the battery. If utility power fails, therapy continues automatically.

With Nasal High Flow (NHF) therapy, patients benefit from warmed, humidified oxygen at a flow rate greater than those seen with conventional oxygen delivery devices, and more than peak inspiratory airflow. NHF treatment is better tolerated due to the heated and humidified air. The NHF apparatus is also smaller and more comfortable on the face than an NIV mask. Patients can continue eating, drinking and talking during treatment, leading to higher compliance. Delivery respiratory gases range from 2 – 60 L/min and O₂ concentrations range from 21 – 100%. NHF is intended for patients in homes and long-term care facilities and may help prevent intubation.

- Tube Side Quick Switch connects tube to either side of the patient
- Kink-free prongs and flexible, low-noise tube
- Compatible with any ventilator with a standard 22mm ISO connector, including Respirationics V60
- Suitable alternative to Philips AC611
- Can be used with F&P 850 and 950 with HFN001-FPA adapter
- Comparable to F&P OptiFlow cannula (OPT942, OPT944, OPT946)

Assured, repeatable accuracy to enable safe, effective weaning.

What is Microflow used for?

Microflow is primarily used to supply supplementary oxygen to infants with bronchopulmonary dysplasia (BPD).

BPD is common in very low birth weight and pre-term infants that have needed mechanical ventilation or have been treated with high oxygen concentrations due to respiratory distress syndrome (RDS)/chronic lung disease (CLD).

The risk of RDS/CLD is inversely related to birth weight and gestational age.

Infants may need very low supplementary oxygen for many months to compensate for underdeveloped lungs.

Microflow benefits

- Enables baby to receive oxygen therapy at home, putting families together sooner and increasing parent satisfaction
- Less time in hospital, lower cost of care
- Accurate, repeatable steps
- Micro step changes in flow
- Enables low flow rates to achieve target saturation
- Enables oxygen flow to be weaned
